Pacific Wood Treating Corporation

Pacific Wood Treating Corporation is one of America's most modern and environmentally clean pressure treating plants. This sophisticated 60 acre facility specializes in remanufacturing, fabrication, kiln drying and preservative treating of domestic and imported hardwoods and softwoods. Our separate St. Helens, Oregon Division is a 40 acre pole yard, where large inventories of poles and piling are constantly air seasoned, classed, peeled, cut-to-length and framed awaiting preservative treatment or direct shipment worldwide.

PWT's self-contained site offers a completely pollution-free environment for preservatively treating lumber, plywood, poles, piling, timbers and all types of fabricated wood products. Some of our special services include:

Remanufacturing

Our surfacing, sanding, boring, trimming, ripping and resawing capacities meet the most exacting specifications. We surface all types of patterns and species, from small moulding to heavy decking and even giant timbers up to 24" x 30".

Fabrication

Our fabrication capabilities include such diverse projects as pre-cut homes for remote areas of Alaska and Central America, crane mats, fender systems, trusses, guitar tops, laminated beams, aircraft spruce, cross arms, etc.

Kiln Drying

With our large dry kiln capacity we can uniformly dry all species of wood in virtually any quantity. Special compartment kilns are available to custom dry small orders rapidly and economically.

Pressure Treating

We provide a wide variety of water-borne, oil-borne and dual treated products. Chromated-copper-arsenate (CCA) pentachlorophenol in heavy oil (Regular Penta) and creosote (Creo.) are combined with our own specialized formulations, such as: Fyr-Gard, WoodGard and water repellent paintable pentachlorophenol (W.R. Penta). We strictly adhere to quality and inspection standards of the AWPB and the AWPB.

Prestaining

We can pre-stain all wood products alone, or in conjunction with our preservative treatment services.

Custom Fabrication

An elaborate fabrication department enables us to rapidly fabricate all your special requirements. From one timber to entire projects, including custom metal hangers and hardware.

Large Diameter Lathe Turning

Our pole yard operates a super-lathe capable of turning custom rounds up to 100 feet in length and 4 feet in diameter. One of our specialties is manufacturing masts, spars and booms for historic sailing ships.

Packaging

We provide export packaging and marking, crating, lumber wrapping and custom packaging to your specifications.

Prefabricate and Preassemble

We are able to prefabricate, pressure treat and even preassemble the most formidable timber constructions to minimize on-site labor requirements and achieve substantial cost savings.

At PWT, when it comes to wood, if we can't do it, it can't be done! We supply virtually any wood product, treated or untreated, to meet your specific requirements.
